v6 / HISTORICAL WALK-FORWARD VALIDATION

Forecast performance before the final September refit

Outer evaluation origins: September 2025 onward · Labels available by 30 September 2026 · USD per barrel

Observed spot price
v6 policy point forecast (v5 retained)
RW · latest published spot

1-day ahead | n=261

RMSE v6 5.12 / RW 7.99 · 35.9% lower

5-day ahead | n=257

RMSE v6 7.84 / RW 9.74 · 19.5% lower

20-day ahead | n=242

RMSE v6 13.94 / RW 14.80 · 5.9% lower

60-day ahead | n=202

RMSE v6 23.45 / RW 25.13 · 6.7% lower

Original stage-one window: Sep 2023–Sep 2026. The fusion layer requires earlier history for training; its outer evaluation starts Sep 2025.

Historical policies refit forward in time. These data also informed strategy development; this is not a new independent test.

Each point is aligned to its target date. RW follows the project publication protocol. No October outcomes or final-model backcasts are used.
